DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-7, in Paper No. 9 is acknowledged.
2. Claims 8-11 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 9.

Specification

3. The abstract of the disclosure is objected to because it contains more than 150 words. Correction is required. See MPEP § 608.01(b).
4. The disclosure is objected to under 37 CFR 1.71, as being so incomprehensible as to preclude a reasonable search of the prior art by the examiner. For example, the following items are not understood: it is unclear to the examiner as to whether the polyurethane or polyamide sheet is adhered to a polarizing sheet or a protective sheet. Paragraphs 0034 and 0054 are found to give conflicting information to the laminate structure. In paragraph 0034, it is described that a protective sheet is applied to both sides of a polarizing sheet; whereas in paragraph 0054, it is described that a polyurethane or polyamide sheet is applied on one side of the polarizing sheet. And in paragraph 0039, the polyurethane or polyamide sheet is described as adhering to a thermally molding resin layer.

Applicant is required to submit an amendment, which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art.

Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter that is not supported by the disclosure as originally filed).

Claim Rejections - 35 USC § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim 1 contains a laminate structure, which comprises a polarizer sheet layer, two protective sheet layers, a polyurethane or polyamide sheet layer, an adhesive, and a thermally molding resin layer. However, the structural relationships of these elements have no proper support in the specification. Although the specification does disclose these structural elements, it does not provide sufficient information to determine the breadth of the invention, in that the specification does not describe the structural relationships of these elements in such a way to enable one define the structure of the laminate.

Art Unit: 1711

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite because it is unclear to the examiner as to how the polyurethane or polyamide sheet layer, the adhesive, and the thermally molding resin layer are structurally related to the protective layers and the polarizer sheet layer. A clear description of these elements and their structural relationships is required.
